

Statistics Denmark

- Registration of foreign trade statistics

Statistics Denmark

The client

Statistics Denmark (Danmarks Statistik or DSt) is responsible for gathering statistics from businesses on the trade and production of goods and services, as well as employee data, etc.

DSt mailed its inquiries to businesses as paper forms, and businesses were required by law to answer.

The challenges

The reporting of foreign trade had become a particular burden for DSt, since the EU customs system (which used to collect inter-EU trade statistics) has moved to the outer borders of the EU, leaving a requirement to register inter-EU trade in a separate, dedicated statistics system.

DSt also had the burden of keying in the data and cross-checking and processing the statistics.

What Resultmaker did

- Used Resultmaker XML Factory™ to develop the data model for all the statistics.
- Expressed the data model in XML Schemas and exported them to the approximately 100 corresponding forms.
- Integrated a customized users and rights management system with the process and forms, in order to fulfill DSt's wish for a system that would manage who had to report what and when.
- Accomplished pre-filling of data from previous reports and external databases.
- Applied the Resultmaker Data Picker to the forms. This is a component that searches specific code databases (such as the tariff of 20,000 codes for types of goods in foreign trade) directly from the client.
- Deployed a comprehensive two-way system integration with the DSt back office.
- Deployed the e-forms to the Danish government-to-business portal Virk.dk.

Results delivered

Both businesses and DSt save huge amounts of time, while the quality of statistics in Denmark is maintained.

Resultmaker ∴ Innovative Thinking ∴ Decisive Technology

Resultmaker is a danish company specialized in the development of intelligent software for improving mission critical business processes across humans and systems – the essence of running and developing the business of our customers.
